

# M10TEK | RISE WITH SAP + INTELLIGENT AUTOMATION EXPERTISE

## Overview

M10TEK is a leading SAP consultancy and technology services firm specializing in helping organizations successfully execute digital transformation journeys through RISE with SAP. Backed by 20+ years of SAP, finance, and IT expertise, M10TEK works with both public and private sector clients to modernize core systems, migrate to S/4HANA, and streamline business operations in the cloud.

## The Shift to RISE with SAP & the Rise of Hybrid Complexity

The move to RISE with SAP represents a monumental shift in how enterprises adopt, deploy, and manage SAP landscapes. While RISE offers a clean, subscription-based model that eliminates on-prem infrastructure and consolidates licensing, it introduces new layers of operational complexity—especially for large enterprises with hybrid environments.

For many companies, RISE is an ideal fit for simplicity: one contract, unified delivery, and bundled services. However, organizations with intricate SAP estates spanning cloud, on-premises, and legacy systems often face challenges integrating RISE into their broader IT strategy. M10TEK helps bridge this complexity with end-to-end automation, visibility, and operational support.

### Hybrid SAP Landscapes Require Intelligent Operations

RISE with SAP environments don't exist in isolation. Most enterprises continue to operate within hybrid frameworks—connecting SAP systems to third-party applications, external tax engines, vendor portals, and industry-specific solutions. Ensuring stability, security, and availability across this mixed landscape requires advanced tools for monitoring, automation, and integration.

### Business-Centric Health Checks and Automation

While RISE with SAP includes technical monitoring for operating systems and databases, many critical business processes require more contextual oversight. M10TEK delivers customized automation for business-layer health checks including batch job tracking, IDoc failures, cross-system messaging, and short dump monitoring. These touchpoints ensure your SAP environment isn't just 'up'—it's optimized for business continuity.

### M10TEK's Intelligent Automation for RISE with SAP

M10TEK's hybrid automation platform allows IT operations teams to standardize and automate low-value, repetitive tasks that fall outside the RISE contract scope. This includes automating employee onboarding processes (e.g., ABAP user creation), workflow-driven reruns, and even full system refreshes—all with minimal manual intervention.

### Empowering SAP Transformation with M10TEK

Whether you're planning your first step into RISE with SAP or managing a hybrid enterprise at scale, M10TEK brings the expertise, tools, and automation platform to simplify operations, reduce risk, and accelerate time-to-value. We are committed to helping organizations modernize responsibly—with intelligence, visibility, and control.
